ODMAP is a *free*, Web-based, mobile-friendly software platform to support reporting and surveillance of suspected fatal and nonfatal overdoses.

The Washington/Baltimore High Intensity Drug Trafficking Area (HIDTA) launched ODMAP in 2017.

What is ODMAP?

- Displays overdose data within and across jurisdictions to help agencies identify spikes and clusters.
- Provides near real-time data to public safety and public health agencies, enabling them to mobilize responses to overdoses more quickly.
- As of November 2021: 123 agencies in 34 counties in SC are registered for ODMAP.

Let's talk STATS:

EMT's in SC administered **6,989** doses of NARCAN in <u>2019</u>! We are estimating more than **8,500** in <u>2020</u> (final counts are not yet officially recorded).

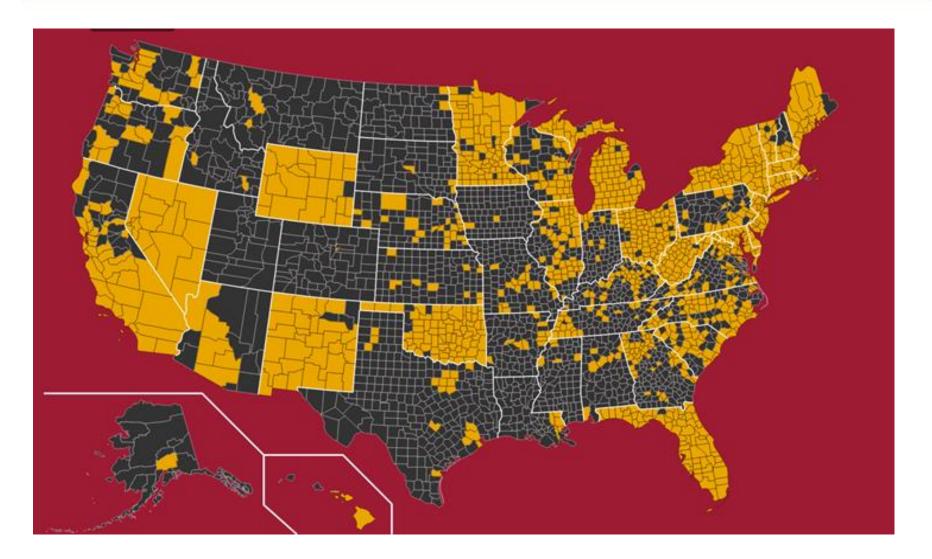

SC has a **LEON** and **ROLL** program where Law Enforcement and Firefighters are also administering NARCAN. Combined administrations in 2019 for LEON and ROLL were **635**. In 2020 LEON and ROLL administered **1,023** doses. **They had a 62% increase in 2020 alone!!!**

OPIOID OVERDOSE DEATHS IN SOUTH CAROLINA:

2016: There were **616** opioid deaths in SC

<u>2020</u>: The CDC is reporting preliminary numbers for opioid deaths in SC at **1,208**!

Chec South Carolina Department of Health and Environmental Control

Major Improvement in SC

Before

- Individual first responder agencies needed to <u>manually</u> enter data in ODMAP
- State participation was sparse

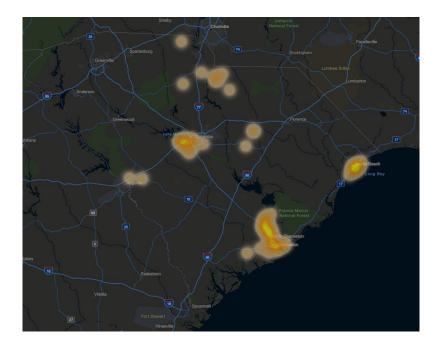

After June 1, 2021

- DHEC Bureau of EMS provides local EMS data automatically
- Near real-time data available consistently statewide

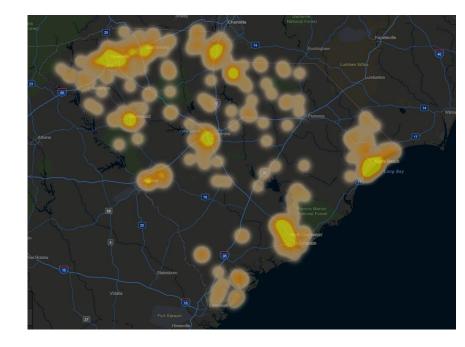

chec South Carolina Department of Health and Environmental Control

From this...

10 days before integration (5/22-5/31)

First 10 days of statewide data (6/1-6/10)

What are the benefits of ODMAP?

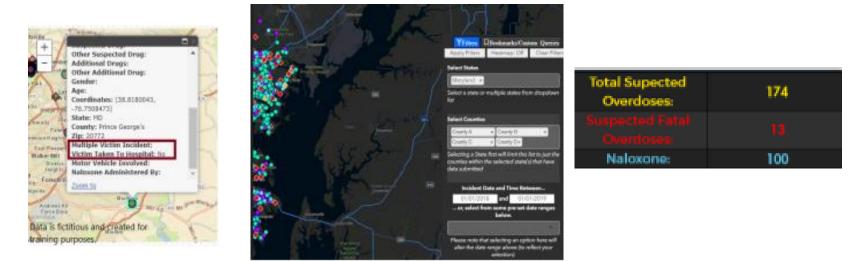

Information can be used in collaboration with community organizations to:

Deploy overdose responses	 Deploy rapid outreach/response teams to provide services and support to overdose victims.
Target community resources	 Target naloxone distribution, prevention education efforts, and other programming to areas most affected by overdoses.
Secure community resources	 Support data-driven strategic planning and resource allocation decisions.

Nec South Carolina Department of Health and Environmental Control

How Can We Use It?

ODMAP can share point-level and summary information with other public health and safety partners to respond.

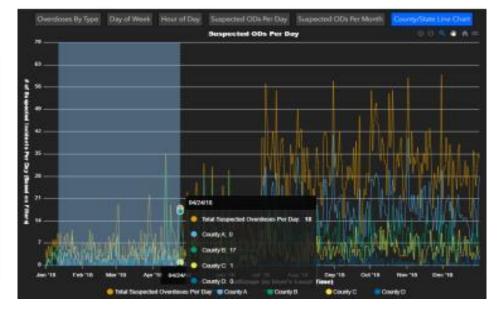

<u>SC attorney general says ODMAP **does not** violate any state</u> <u>or HIPAA laws concerning protected health information.</u>

How Can We Use It?

ODMAP can help identify **trends** in the **number** of overdoses.

Suspected Overdoses per Month

How Can We Use It?

ODMAP can help identify **trends** in the **location** of overdoses.

Chec South Carolina Department of Health and Environmental Control

We have the data, what's next?

What do we know?	What can we do?
Baseline data on overdose	Plan for post-overdose outreach
Geographical high-burden areas/ "hotspotting"	Target Narcan distribution and prevention messages
Spikes in overdoses or specific	Form early warning and response plans

How Can We Use It?

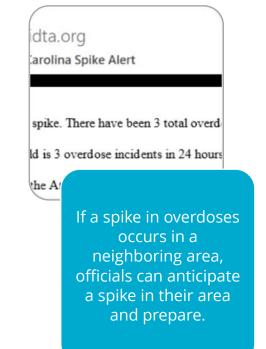

You and other participating agencies (e.g. law enforcement) can receive spike alerts.

A spike alert sends an email notification if the total overdoses in an area exceed a predetermined threshold within a 24-hour period. **Chec** South Carolina Department of Health and Environmental Control

OVERDOSE SPIKE RESPONSE FRAMEWORK

A companion guide for ODMAP stakeholders

24

SOCIAL SERVICES AND SCHOOLS

Recommended Role

During an overdose spike, social services and schools should be a part of an Overdose Spike Response Team. Their roles differ but both have the goal of protecting children.

TIP FOR STRATEGIC PLANNING: Education and training geared toward first responders can improve reporting of overdose incidents that involve children, and ultimately connect children to available resources.

PROMISING PRACTICE In West Virginia, the "Handle with Care" model promotes a strategy to ensure trauma-exposed children receive appropriate interventions to help them achieve at their highest levels academically. Exposure to a family member's overdose can be a traumatic experience, and the "Handle with Care" model is a promising practice for mitigating adverse childhood experiences by ensuring students and families receive necessary trauma-focused therapy.

In West Virginia, the "Handle with Care" model is initiated when a law enforcement officer encounters a child during an overdose call. The officer forwards the child's name and the words "handle with eard" to the appropriate school or child care agency before the next school or child care agency before the next school and the school trauma-sensitive curriculum. Teachers are trained on the impact of trauma on learning so that they can incorporate interventions to mitigate the negative impact of trauma for identified students. The school provides additional intervention or on-site trauma-focused mental healthcare.

- PRE-SPIKE
 Coordinate with Overdose Spike Response
 Plan Team Lead to develop an Overdose
 Spike Response Plan
 Ensure first responders are trained and
- Ensure first responders are trained and aware of protocols for overdose incidents that involve a child
- Identify information to be shared from first responders to Child Protective Services (determine the protocols and reporting requirements)
- Identify process for notifying school resource officer, counselors, or appropriate staff during overdose spike

DURING A SPIKE

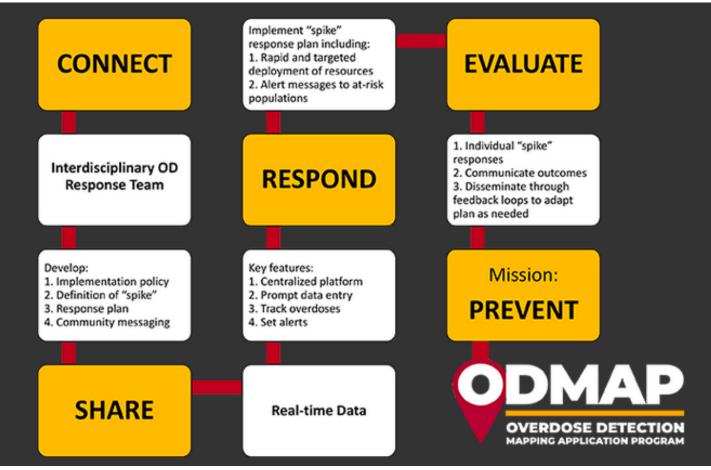

Recommended Actions

- Deploy Overdose Spike Response Plan
- Notify school resource officer, counselors, or appropriate staff of overdose spike
- Alert school administration of overdose spike
- Implement handle with care approach, school-wide

Washington/Baltimore HIDTA

chec South Carolina Department of Health and Environmental Control

Collaborative Response Plans

IEC South Carolina Department of Health and Environmental Control

Example: Shelby County, TN

- Automated EMS data feed enables health department to receive realtime data
- Health department can issue press releases within two hours of receiving a spike alert
- Health department plans Naloxone distribution and overdose prevention events based on hotspots

IEC South Carolina Department of Health and Environmental Control

Example: Charleston County, SC

- ODMAP is used consistently by four different law enforcement jurisdictions
- Share information with Charleston Addiction Crisis Task Force (ACT Force)
- Successes:
 - Recognized spikes across jurisdictions, including several overdoses in the summer of 2020 associated with green Xanax pills
 - Noticed a trend of increased drug use in a cluster of hotels along the highway, and worked with task force to provide Naloxone training to staff at 10 hotels and increase presence in the area to respond more quickly

Post-Overdose Outreach

- Outreach to overdose survivor
- Link with services and prevent repeat overdoses
- Multidisciplinary team, with peer support specialist/ recovery coach as lead

C South Carolina Department of Health and Environmental Control

Post-Overdose Outreach

• Partnering with community paramedic/ EMS: Community Outreach Paramedic Education (COPE)

- **DHEC has funding available** to support EMS agencies and partners who sign a contract to participate.
 - Have community paramedic/EMS agency contact program coordinator Kenny Polson (<u>polsonkb@dhec.sc.gov</u>)
- Where: Bowers EMS, Lancaster County EMS, Myrtle Beach Fire and Rescue, Greenville County EMS
- Partnering with law enforcement: "quick response teams"
 - Where: Charleston County, other states (Cook County (IL) Sheriff's Office, Huntingdon (WV) Police Department, Broome County (NY)

Who can access and enter data?

- ODMAP is available only to <u>state, local, federal and</u> <u>tribal agencies</u> serving the interests of <u>public</u> <u>safety and health</u> as part of their official mandate, including licensed first responders and hospitals.
- However, ODMAP users can also share general information (e.g. spike alerts, hotspot areas, summary data) with treatment/recovery partners for response outreach.

How do I register for an account?

For agencies new to ODMAP:

- Your organization **must first** designate an "agency administrator" to sign an electronic participation agreement with Washington-Baltimore HIDTA.
- A member of agency leadership should fill out the online form: <u>http://www.hidta.org/request-agency-access/</u>
- They will receive an email with a link to execute the document with their initials.
- Once this step is complete, they will receive an email with their agency's unique agency code which is used to register additional users within the agency.

IEC South Carolina Department of Health and Environmental Control

How do I register for an account?

Once an agency agreement is in place, an individual staff member can register – here's how:

- 1. Navigate to: <u>https://odmap.hidta.org/</u>
- 2. Click "Register as a new user"
- 3. Complete the registration form using agency code (*get the code from the agency administrator*)

og in.		
se your registered account to log in. Email		Insers
Password Remember me?	Checking this box will save your	Register New
egister as a new user Register New Users	password.	

- 4. Review the ODMAP Policies and Procedures (scroll through the entire document or you will not be able to submit your application
- 5. Click "Register" or "Submit".

6. Check the email you used to register for an email from ODMAP and click the link to verify your email address.

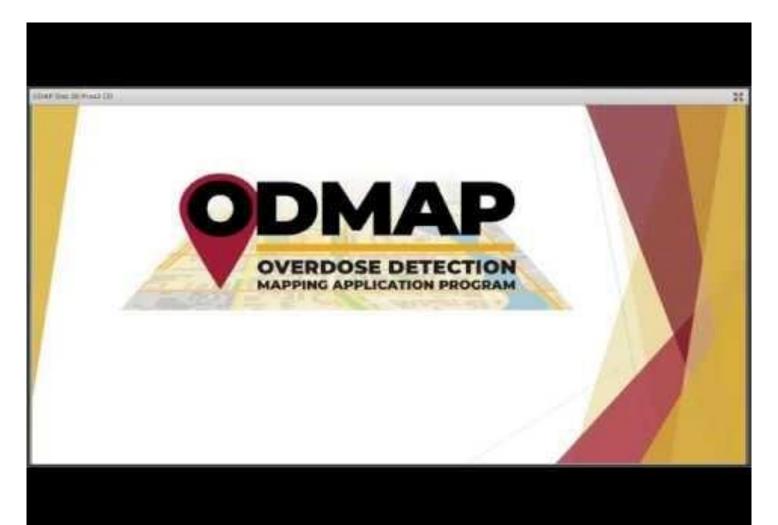

How do I register for an account?

- After the individual completes the registration form, the agency administrator will be notified and must activate the Level 1 account.
- The agency administrator can provide access to National Map for those with a need to know and right to access.
